

# WETLAND SOD

Pre-vegetated Coir Erosion Control Mats

a product of

**NORTH FORK**  
**NATIVE PLANTS**

hardy plants for the mountain environment

# Applications

# Streambank Stabilization

WETLAND SOD is an instant way to establish native vegetation on shorelines and stream banks. It is a matrix of coir erosion control matting and wetland plants grown hydroponically to maximize root growth. WETLAND SOD can be rolled out on any wetland or riparian site to provide immediate aesthetics, soil stabilization, weed suppression and habitat. The mature plants found in WETLAND SOD have minimal soil requirements and can tolerate fluctuating water levels in just a few weeks. WETLAND SOD is quick and easy to install, simply roll it out and stake in place. WETLAND SOD is available in a variety of native sedge, grass, bulrush, spike rush and rush species and can be custom grown to meet your specific need.

## ADVANTAGES

**1-877-444-6996**

- Immediately stabilizes erosion prone areas
- Easy to install and low maintenance
- Immediate aesthetics
- Weed suppression
- Fully rooted in 2-4 weeks
- Tolerant of fluctuating hydrologic conditions
- Custom grown with mixes adapted to a wide range of water levels
- Uptakes excess nutrients and improves water quality
- Resistant to wildlife, livestock & human disturbance
- Instant enhancement for fish and wildlife habitat
